

INTRODUCTION TO VISUALISATIONS

1 DAY COURSE

This course introduces, explains and explores using Visualisations for communicating IT Architectures, Designs and IT Solutions.

It provides participants with valuable insights in understanding how to use visualisations, such as diagrams, images and presentations, for describing and responding to IT related problems..

WHO WOULD BENEFIT FROM THE COURSE?

This course is designed for people who have a need to understand, create and communicate IT and systems diagrams, images and presentations for:

- Executives and Boards,
- Programmes and Projects,
- Research and Development, IT Enterprise Architecture delivery and Systems Engineering.

LEARNING APPROACH

The course comprises of a mixture of stand-up instruction, guided discussions and exercises which are used to deliver a very practically-oriented learning outcome. It is well suited to use within organisations, on an onsite basis in either a standard or customised version.

COURSE OBJECTIVES

At the conclusion of this course participants will understand:

- Why visualisations assist in conveying a message;
- What types of visualisations and techniques work best with different people groups
- Where participants would use IT visualisations in describing a system;
- What tools are available for creating visualisations;
- How to use visualisation techniques described in this course;
- How visualisations provide historical context for future developments;
- How to improve communications using visualisations.

WHAT DOES THE COURSE COVER?

- Concepts and Terms
- Types of Visualisations
- Defining Visualisations
- Visualisation Techniques
- Choosing Visualisations
- Preparing Diagrams for use
- Creating Visualisations
- Synthesising Thoughts
